

I have been a subscriber of XM Satellite Radio for 2 years. It is such a valuable service to people like me who travel all over the country. The instant traffic and weather information they provide helps a great deal. It is not logical to me that a big lobbying group that doesn't want the competition could petition to have select programming of a paid subscription removed. We want the service and we pay for it, there should be no lobbying group or bureaucratic red tape to interfere with what the people want just because of competition. Thank you for your consideration.
